

XM Radio is the greatest than to come along in a while, why should or would anyone want to stop or restrict the broadcasting or limit it. Traffic and weather channels are very important when going to a city your not aware of the local channels are and you need traffic or weather up dates. Government has just gotten too big and need to back up a little to see what they can do to help the people not put restrictions that are going to hinder the public.

Thank You,

Curtis Friebe1
